

FACULTY OF ENGINEERING, DESIGN AND TECHNOLOGY

DEPARTMENT OF COMPUTING AND TECHNOLOGY

DAY 3 REPORT

Introduction

Today we were introduced with the Blue Button.

- **BLUE BUTTON**

This enables a live chat (Meet) between the students and lecturer.

It enables group chatting

Enables having or conducting polls and academic quizzes .

WHAT WAS THERE TO LEARN

We learnt how to conduct an online session, mute and unmute our voice intera

ctions where necessary.

It also proves and notices attendance of the students.

- **PROGRAMMING**

In this section we have two basic branches:

1. Pseudocode
2. Flow charts

Description of the Programming

It is used to describe programs of an algorithm program with lighter English. It enables one to outline logic.

*Assignment was given and we did it.

Use of Pseudo code

- o Helps you think through the problem and solution before coding.
- o It is readable by both programmers and non-programmers.
- o It's translated in programmable language
- o It catches logical flaws
- o It allows to discuss and refine algorithms

KEY ELEMENTS OF THE PSEUDO CODE

- (a) User input(input, read, get)
- (b) Displays results(out put, print, display, show)
- (c) Calculations and assignments (compute, set, calculate)
- (d) For selection (If, then, else, end if)
- (e) Condition based loops (while, do while)
- (f) Count based loops (for , end for)
- (g) Post condition loops (repeat, until)

(h) Provoking sub-procedures or functions (call)

- **FLOWCHARTS**

They are a core and illustration to the flow of operations.

They help in :

- a. Documenting processes
- b. Analysing processes
- c. Designing new processes
- d. Communicating complex ideas
- e. Problem solving
- f. Programming

Flow chart shapes

Ovals- start and end

Rectangle -process verbs and action

Arrows- indicators

Diamond- decision I.e yes, no, true, false

Parallelogram- input and output

ASSIGNMENTS

1.
